Zero-Ohm Systems Proudly Appoints Long-Time Client (V8-Sound) as Exclusive Distributor in Indonesia

Montreal, Canada, November 11, 2020

We are pleased to reveal a long-standing partnership with V8 Sound in Indonesia and announce the next level of our cooperation. V8 Sound is a multi-layered company; it is a manufacturer and has paired their equipment with our technology in small, medium, and large-scale, high-profile projects for years.

We think that there is no product that is near the quality and the results delivered by Zero-Ohm Systems, so we trust that it will be a big success in the sound system and the public addressing business in Indonesia and around the world. We can attest to the quality and the long-term performance of these units as we have installed them in all corners of our country. Many of these projects date back a few years and the performance and long-term reliability speaks for itself.

Mr. Vadie Akbar

President & Director of V8 Sound

Despite the challenges of the COVID-19 crisis, we have worked hard with all our partners and have added many important distributors, dealers and integrators to the team in recent months as we continue to spread the word about our unique benefits. This signing is a pleasure to unveil because V8 Sound has been a loyal customer for many years and they are in a clear position to fully attest to the revolutionary benefits, performance in a wide range of settings as well as the long-term reliability of all our products.

George Dracopoulos

Co-Founder, President of Zero-Ohm Systems

About ZOHMS Inc.

Zero-Ohm Systems is a global manufacturer of a unique award-winning patented technology. Best of Show Distinction at ISE 2020; Best New Product Technology (Innovations Showcase) InfoComm 2017. Our passive devices interconnect between any amplifier and loudspeakers without worrying about speaker loads, impedance and long cables runs. Forget the limits of traditional systems. You can now connect 20-40 speakers (or more) in parallel to one amplifier without the use of transformers. Until now, the ability to connect multiple speakers in parallel was confronted by the issue of operating the amplifier at a safe impedance. Although there are amplifiers that operate at 4 ohms and 2 ohms safely, any effort to drive them below the rated resistance load led to device failure. With this revolutionary invention, the rules have changed! Zohms products are ideal for major installations like hotels, shopping malls, theme parks, stadiums, bars, cinemas, reception halls, cruise ships, restaurants, airports, and more.
